**CONCISE EXPLANATION OF
NON-ENGLISH PATENT DOCUMENTS**

German patent document DE 198 01 346 C1, which is listed in the International Search Report, relates to an apparatus for providing an embossed shape to a fusible material. The apparatus includes at least one embossing tool, which uses a laser beam to melt or emboss in a melting/embossing zone. A glass fiber optic guides the laser beam from the laser source to the melting/embossing zone.

European patent document EP0 896 259 A2, which is also listed in the International Search Report, relates to a method for forming a holographic structure on the surface of a substrate, which is coated with a material that hardens on irradiation. Such materials include a monomer that can be set by ultraviolet radiation. An embossed pattern is formed in the coating and the coating layer is set by illuminating (preferably modulating) light. An apparatus with a cylinder is provided over which the substrate passes. The cylinder carries the radiation-hardening coating, preferably a light-setting monomer.

Applicant respectfully submits that the requirements of candor and good faith set forth in 37 C.F.R. §1.56 have been fulfilled, having submitted all known references in compliance with 37 C.F.R. § 1.97 and § 1.98. Applicant believes that no fee is due at this time. If it is determined that a fee is due, please charge our Deposit Account No. 08-2461.

In view of the present submission, it is believed that the above-referenced application is, in all respects, complete and in condition for examination and favorable consideration. If the Examiner has any questions or comments relating to the present application, he or she is respectfully invited to contact Applicant's attorney at the telephone number set forth below.
